What error message did you encounter (if any)?
I got a StringIndexOutOfBoundsException error at first because I accidentally used <= instead of < in my for loop condition.
What unexpected behavior did your program exhibit?
Before I added the lowercase conversion, uppercase vowels like 'A' or 'E' entered by the user were being completely ignored by the counter
What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)
It was a combination of an off-by-one loop boundary error and a case-sensitivity logic oversight
Include a screenshot of specific lines of code.
Again...wasnt able to get a screenshot...so sorry
How did you fix the issue?
I fixed the loop boundary to i < lowerText.length() and added text.toLowerCase() so all checks evaluate uniformly against lowercase characters.
Provide the corrected code or solution using a screenshot.

```
        String lowerText = text.toLowerCase();

    //Loop through each character in the string
        for (int i=0; i < lowerText.length(); i++) {
            char ch = lowerText.charAt(i);
```
